Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application:

Listing of Claims:

1. (Currently Amended) A method of providing a file transfer service through a

mobile communication network, comprising the steps of:

(a) storing a data file and transfer conditioning information thereof received

from a first mobile terminal connected through the mobile communication network;

(b) transmitting information for transferring the data file through the mobile

communication network based on the stored transfer conditioning information; and

(c) checking response information sent from a second mobile terminal

answering to said information for transferring the data file, and transferring the data file to the

second mobile terminal based on the checked result,

wherein said transferring conditioning information includes a blocking time

period set in the first mobile terminal of when not to permit a file transfer to occur by the first

mobile terminal.

2. (Currently Amended) The method set forth in claim 1, wherein said transfer

conditioning information further includes transfer blocking time zone information, identification

10

Docket No. LT-0008

information of the first and the second mobile terminal, and size information of the data file to transfer.

- 3. (Original) The method set forth in claim 2, wherein said information for transferring the data file includes size information of the data file to transfer.
- 4. (Original) The method set forth in claim 3, wherein said information for transferring the data file further includes type information of the data file to transfer.
- 5. (Original) The method set forth in claim 1, wherein said response information includes spare storage capacity information of a peripheral device connected to the second mobile terminal.
- 6. (Original) The method set forth in claim 1, wherein said step (c) determines whether or not to transmit the data file based on the response information and the stored transfer conditioning information.
- 7. (Currently Amended) A method of providing a file transfer service through a mobile communication network, comprising the steps of:
- (a) storing a data file and transfer conditioning information thereof received from a first mobile terminal connected through the mobile communication network;

Amendment dated <u>August 24, 2005</u>
Reply to Office Action of <u>February 25, 2005</u>

- (b) selecting one among the stored data files based on the stored transfer conditioning information; and
- (c) transferring the selected data file to a second mobile terminal specified as a destination of the selected file,

wherein the transfer condition information includes information of a blocking time period of when to block a file transfer, and

wherein said step (b) selects one data file whose transfer blocking time period is closest to a current time.

- 8. (Canceled)
- 9. (Canceled)
- 10. (Currently Amended) The method set forth in claim-87, wherein said transfer blocking time zone period is set to a time zone period when voice traffic is normally congested.
- 11. (Currently Amended) The method set forth in claim 7, wherein said step (c) transmits another data file selected next based on the transfer conditioning information to a third mobile terminal specified as destination of the next selected file, if trials of making connection to the second mobile terminal—are—failed_fail.

12. (New) A file transfer method comprising:

requesting a blocking time period be set in a first mobile terminal at which a file transfer is not to occur;

Docket No. LT-0008

selecting a file to transfer to a second mobile terminal;

receiving by the second mobile terminal, a display message indicating the file selected by the first mobile terminal is ready for transfer at a time different than the time period at which the transfer is not to occur, said display also including a size of the file to be transferred; and

delaying the file transfer until the second mobile terminal is connected to an external apparatus having a sufficient memory capacity to store the size of the file to be transferred.

- 13. (New) The method set forth in claim 12, wherein the file selected in the first mobile terminal is stored on a file handling server with a plurality of other files to be transferred by other mobile terminals.
- 14. (New) The method set forth in claim 13, wherein the file handling server first transfers a file whose blocking time period is closest to a current time.
- 15. (New) The method set forth in claim 13, wherein when the second mobile terminal is connected to the external apparatus, the second mobile terminal sends information

Docket No. LT-0008

about a memory capacity of the external apparatus to the file handling server and the file handler

server determines whether the memory capacity of the file handling server is sufficient to store

the file to be transferred.

16. (New) The method set forth in claim 15, wherein the file handling server

transmits an error message to the second mobile terminal if the memory capacity is insufficient

to store the file to be transferred.

17. (New) The method set forth in claim 15, wherein the file handling server

transfers the file to the external apparatus via the second mobile terminal if the memory capacity

is sufficient to store the file to be transferred and a current time is not within the blocking time

period.

18. (New) The method set forth in claim 17, wherein the file handling server further

transmits a message indicating a file transfer is in progress to the second mobile terminal when

the file is being transferred to the external apparatus.
